

# Your Electric Bill “Tracker”

Mishawaka Utilities  
126 N Church St  
P.O. Box 363  
Mishawaka, IN 46544  
(574) 258-1630

In the “old” days, electric rates were stable and did not change very often. In the 1970s that began to change, as fuel shortages resulting from the OPEC Oil Embargo caused wild fluctuations in fuel cost, a large component in the cost of producing electricity. In those days, electric companies had no mechanism for passing through costs associated with the production of energy, short of filing a very expensive and lengthy rate case with regulators.

We do not produce any electricity in Mishawaka. We buy all our energy from I&M Electric Company and deliver it over our poles and wires to your home or business. The wholesale price we pay for electricity fluctuates frequently; it is especially sensitive to the cost of fuel used to produce electricity (natural gas, coal, nuclear). What we pay for this purchased power amounts to a significant 75 percent of the retail rates we charge for electricity. That means that even small changes in our cost of energy can have a serious impact on our local operations.

We calculate what we project our wholesale cost of power will be, looking ahead three months. The Tracker is a fixed surcharge per kWh of energy we “expect” to sell during the next quarter. It is fixed for three months at a time, but fluctuates from quarter to quarter; it is posted on our website as a Rate Adjustment.

At the end of each quarter, we compare the usage and cost we projected three months earlier to what actually has happened. Any variance is added to or subtracted from the Tracker calculation we make for the next quarter. So the current Tracker, in essence, looks forward three months and is adjusted, or “trued up” in arrears by changes over the prior three months.
